

If you're having trouble following along with the coding tasks on your own, you can find the finished code for the Sunshine App in the Udacity/Sunshine repo on Github:

<https://github.com/udacity/Sunshine>

This should be used as a back-up after you've attempted the exercises on your own.

To locate the code snippet for each coding task, click the branch dropdown and scroll to find the snippet you're looking for (organized by lesson).
